

YOUR AIRDREAM STREAMER & THE NETWORK

1

AIRPORT UTILITY – The indispensable tool for resetting your product :

After reset or simply in order to re-name your device, you must have installed the "Airport Utility" software on your Mac or PC.

An Apple CD is delivered with your product. Airport Utility is on this CD. If you don't have this CD available, it is also easy to download the software from the Apple website.

For Mac users, Airport Utility is in the Tool file of the Applications file.

For Windows users, Airport Utility is accessible after selecting Start > All programs > Airport.

RESET – How to reset and reconfigure your product :

! In order to use your product, it is not necessary to reset it. This operation is not trivial and we do not advise to do it!

Nevertheless, if you have reset your product, you must be very careful for this operation. It must have been done very correctly, or no configuration will be possible.

You must push on the rear "reset" button at the rear side of the device with the help of a pen or a pin for a few seconds, while the product is turned on. Once the AirDream logo (or the Led) is blinking **red quickly**, it means the parameters have been set to zero.

Wait almost **one minute** until the AlrDream logo (or the Led) blinks in **red slowly** and in a regular pace, and you are ready to reset the station.

- 1. Reset first your product (see separate document : « Reset Airdream E »)
- 2. Connecting your device to your PC or Mac
 - a. To open « Available wireless networks », click or double-click on the network icon ($\overline{\mathbb{M}}$ or $\overline{\mathbb{H}}$) in your toolbal.

 You should already be connected to your network, (here, for demonstration, it wears the name « XTREME ». If not, connect first to your WiFi network.
In the list of available wireless networks, double-click on the name of your device's network.
